

Leica DX Office Shield Quick Guide

Getting Started

Introduction

DX Office Shield

Leica DX Office Shield is a Windows based software package for Leica Smart locators. The Software provides product configuration and usage reports.

Download and install DX Office Shield on your PC

Download (Software)

<https://leica-geosystems.com/products/detection-systems/cable-locators/dd-smart-utility-locators>

- when it has to be right

Getting Started

Before you begin

System Requirements;

Windows 7(64 bit) or later

Bluetooth USB

Connectivity;

Bluetooth DD220 Smart, DD230 Smart locators

Bluetooth Digicat 600 and 700 family locators

USB DA Signal Transmitters

Before you begin

Notes

Bluetooth enabled Digicat locator

- Switch on and select BT1 or PC from the menu
- An external Bluetooth dongle with Toshiba drivers is recommended.

DD220 Smart, DD230 Smart locators

- Any active Bluetooth setting is compatible
- When connected to DX Office Shield the locator will remain on until disconnected

DD Smart Locators and DA Signal Transmitters

- DD Locators and DA Transmitters use Micro USB
- Refasten the USB cover to protect against ingress

- when it has to be right

Leica
Geosystems

Getting Started

USB

DD Smart Locators

 To maintain environmental protection open and use the USB port only in dry conditions. Always reinstate the cover after use.

1. Unscrew the fastening screws of the cover and open it.

 For guidance on establishing a connection, follow the instructions on the external device or software. Refer to the manufacturer's instructions.

2. After disconnection, reinsert the cover and tighten the fastening screws.

DA Signal transmitters

1. Unscrew the fastener of the cover.

2. Lift the cover of the battery compartment to access the USB port.

 For guidance on establishing a connection, follow the instructions on the external device or software. Refer to the manufacturer's instructions.

3. After disconnection, close the cover of the battery compartment and tighten the fastener.

To maintain environmental protection open and use the USB port only in dry conditions. Always reinstate the cover after use.

DX Office Shield

Navigation tree

Navigation Tree

The navigation tree is used to select a DX Office Shield option and is highlighted when selected

Manage Device; Is used to connect to and update locator settings

Retrieve logs; Is used to download locator logfiles

Data; Is used to provide an overview of logfile content

Reports; Is used to generate locator utilisation reports

CalMaster; is used to verify locator`s calibration and produce certification

Settings; Is used to adjust DX Office Shield settings

User Guide; Is used to display this User Guide

About; Is used to display DX Office Shield version information.

Exit; Is used to exit the application.

- when it has to be **right**

Manage Device

Connecting to a Device

Connecting to a device

Bluetooth Connection

- 1) Device searching is automatically activated.
Available devices are shown in the device list.
- 2) Double Click on the required device.

USB Connection

- 3) Before commencing connect the PC and device via a USB cable. Power on the device. Searching is automatically activated.
- 4) Available devices are shown in the device list.
Double Click on the listed device

When connected the Manage Device page will update and show available device settings.

- when it has to be **right**

Update

Manage Device

Is used to connect and update device settings. **Screen layouts will differ depending on device type**

- 1) **Connection;** Shows the status of the connected device and allows you to update to the latest firmware.
- 2) **Information;** Shows the devices contact information
- 3) **Maintenance;** Shows the devices maintenance status
- 4) **Lockouts:**
 - **RTCCheck on (Real-Time Clock)** - locator will no longer function if the RTC fails, **RTCCheck off** locator will continue to function if the RTC fails
 - **CalCheck on** – locator will no longer function if the calibration due date has expired, **CalCheck off** – locator will continue to function when the calibration due date has expired.
- 5) **Alerts;** Shows the devices alert settings
- 6) **Communication;** allows you to create your own Bluetooth output
- 7) **Settings;** Used to update the Locator's logo. Click update & navigate to the saved image
- 8) **To update your device;** type in the latest information or select an option and click on the relative **Update** button

Manage Device

Bluetooth Custom Output

Manage Device – Bluetooth Custom Output

The Bluetooth output can be configured on DD Smart locators or

- 1) Select Communication > User
- 2) Enter a name for your Customer format and click Create
- 3) Edit the created custom output and use the arrows to select and deselect fields of interest. Fields of interest for your custom format are shown on the right hand side
- 4) Save and close

Manage Device - Updating DDSmart Locators Splash Screen

The splash screen (Start up image) can be updated for DD Smart Locators

- 1) Select Options > Logo Update
- 2) Navigate and Select the image you want to use and click on Open.
- 3) Image file formats can be selected from the drop down menu
- 4) Confirm you want to overwrite the existing locator image
- 5) Progress bar shows transfer progression

Updates should be done via a USB connection cable

- when it has to be **right**

Retrieve Logs

Introduction

1

2

Status:

Transferred by:

Files on locator:

File Range To:

Date To:

All Files

3

4

Import CSV files

1) **Connection;** click the search icon to begin the log retrieval process

2) **Download Options;** enter your name or initials in the 'transferred by' box. There are 3 log retrieval options;

- **Specific file range;** select this option to download specific log files of your choice e.g. for the first 10 log files from the locator enter 1 To: 10
- **Date Specific file range;** select this option to download specific log files from a date of your choice. Select a date from the calendar and click the search icon to display the log files for this selected date.
- **All Files;** select this option to download all log files from the locator.

3) **Download Locator Log Files;** Click the download icon to begin the download process. Individual file progress and overall progress will be shown on the status bars.

4) **Import CSV Files;** import saved locator files or folders. Click on the file or folder icon and navigate to the logfile location.

- when it has to be **right**

Data Introduction

Data – Introduction

Data Is used to provide an overview of logfile content

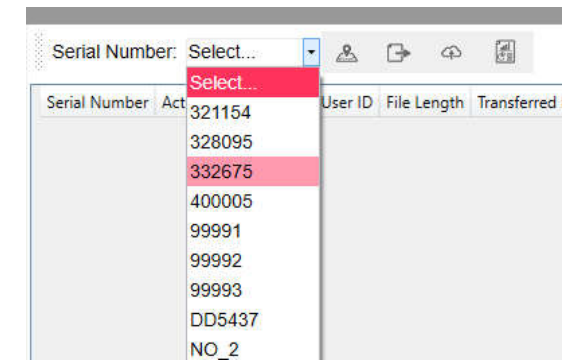

- 1) **Option Bar;** allows you to select locators and access other menu options.
- 2) **Logfile title;** provides an overview of logfile content including date, User ID, File Length (size), Locator type, and transfer information
- 3) **Logfile content;** shows scan information as recorded on the locator whilst in use. Entries are per second of use
- 4) **Locator Selection;** use the dropdown menu to select a locator

Logfile content will be different between model types

Data - Maps

Maps can be generated if logfiles contain GPS content

- 1) Select a logfile title that contains GPS content
 - 2) GPS content is in the Latitude and longitude columns
 - 3) Select Maps and then map type.
 - Google Map Files open in a web browser
 - GPX files can be used in GPS viewers including Open Street Maps
 - KML Files can be opened in Programs such as Google Earth
-
- An Internet connection will be needed to view maps
 - For KML Files Google Earth will need to be installed on your PC

- when it has to be right

Data – Exporting Files

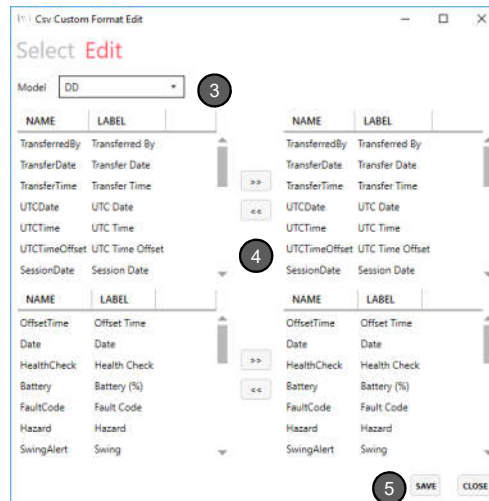

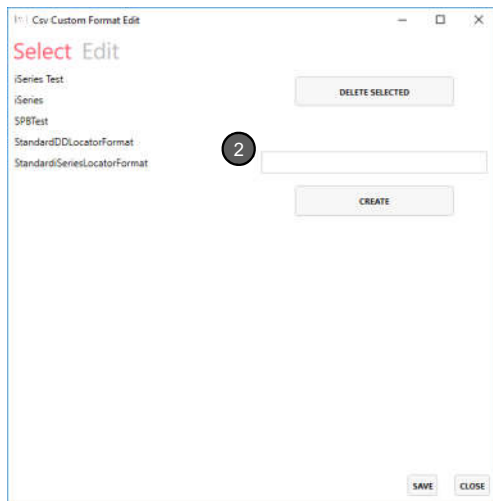

Maps can be generated if logfiles contain GPS content

- 1) Select a logfile title that you want to export
- 2) Select Export and choose a format.
 - Standard Format is a template that exports all logfile information
 - Custom Format allows you to select fields of interest
- 3) Save files to your PC

Data

Exporting CSV Files

1

Data – Exporting Files

Custom Format allows you to select fields of interest

- 1) Select Export and choose Custom format
- 2) Name your custom format and move to the Edit tab
- 3) Select the locator model type
- 4) Use the Arrows to select and deselect fields of interest. Fields of interest for your custom format are shown on the right hand side
- 5) Save and close, custom format will be added to the template list

- Custom formats can be updated as required.
- DD Smart Locators and iSeries locators have different formatting. The two are not compatible

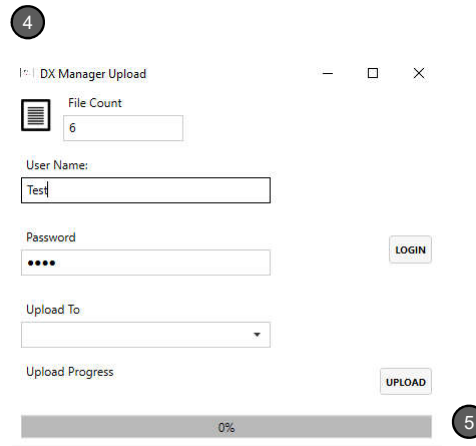

- when it has to be right

Data

Transfer to DX Manager

CalMaster

Introduction

1

2

3

4

The screenshot displays the CalMaster web interface. The 'Connection' section shows a table with columns for Model, Serial Number, Firmware Version, and Calibration. The 'Login' section includes input fields for User Name and Password, a Login button, and links for Register and Forgotten Login Details. The 'Certificates' section shows a dropdown for Serial Number (400007) and a table of local certificates with columns for Verification Date and Pass.

Model	Serial Number	Firmware Version	Calibration
DD230 SMART	400007	Unknown	21/11/2018

Local Certificates

Serial Number: 400007

Verification Date	Pass
21 November 2018 15:53:49	✓
20 November 2018 16:32:44	✓
20 November 2018 15:10:09	✓
20 November 2018 15:04:50	✓

CalMaster - Introduction

CalMaster is used to activate the DD220/DD230 SMART locators Calibration Verification. An account is required for this service.

- 1) **Connection;** Allows you to connect to a device
- 2) **Login;** User Registration or Login to DX Office Shield CalMaster
- 3) **Verification Section;** Provides access to purchase Calibration Verification credits and to activate a device Calibration Verification
- 4) **Certificates;** Provides access to test certificates saved on your PC or certificates saved to DX Field Shield server.

**For all enquiries email the support desk
dxshield.support@leica-geosystems.com**

- when it has to be **right**

CalMaster Registration

The image shows two screenshots from the CalMaster registration process. The first screenshot (labeled 1) is a web browser window titled 'DXSHIELD CALMASTER REGISTRATION'. It contains a registration form with the following fields: First Name, Last Name, User Name, Company, Address Line 1, Address Line 2, Address Line 3, Country (a dropdown menu currently showing 'United Kingdom'), Email, Confirm Email, Password (with a red asterisk indicating a requirement), and Confirm Password (with a red asterisk). Below the form is a checkbox for 'Agree to Terms and Conditions' and a note: 'By ticking this box you accept our [Terms And Conditions](#) and [Privacy Policy](#)'. At the bottom of the form are two buttons: 'REGISTER' and 'CANCEL'. The second screenshot (labeled 4) is a small dialog box with the title 'Registration Successful.' and the text: 'You will receive an e-mail shortly asking you to confirm registration. Please click on the link provided to activate your account.' There is an 'OK' button at the bottom of the dialog.

* Note when generating password:

The password must be at least 6 characters in length, must contain an upper and lower case letter and must contain at least one number

CalMaster– Registration

Registration creates an account for DX Office CalMaster.

Registration is accessed from the CalMaster Login section.

- 1) Complete the Form**, please note that the information you enter is used to populate the Calibration Verification certificate. **The Password** needs to be at least 6 characters, contain a combination of upper and lower case characters and include at least one number.
- 2) Review and agree** to the Terms and Conditions
- 3) Click on Register**

Purchasing Credits

CalMaster – Purchasing Credits

Calibration Verification credits can be purchased and these are saved to your account. A credit is used to activate Calibration Verification.

- 1) Credits Available;** displays the number of available Calibration Verification credits
- 2) Click on Buy;** this will take you to an eCommerce site where credits can be purchased. Purchased credits will be loaded to your account within 60 minutes
- 3) Refresh;** Click on Refresh to update and display recently purchased credits.

Note,

Your DX Office Shield email address is used to identify your account throughout the purchase process. Please ensure that this is entered correctly.

For support enquires contact;

CalMaster

Purchasing Calibration Verification Credits – Article Numbers

Calibration Verification Credits

Article	Description
5004666	DD220, DD230 CAL Verification Credit x 1. To be used in DX Office Shield CalMaster for calibration verification of a single DD220/DD230 locator.
5004665	DD220, DD230 CAL Verification Credit x 50. To be used in DX Office Shield CalMaster for calibration verification of DD220/230 locators.

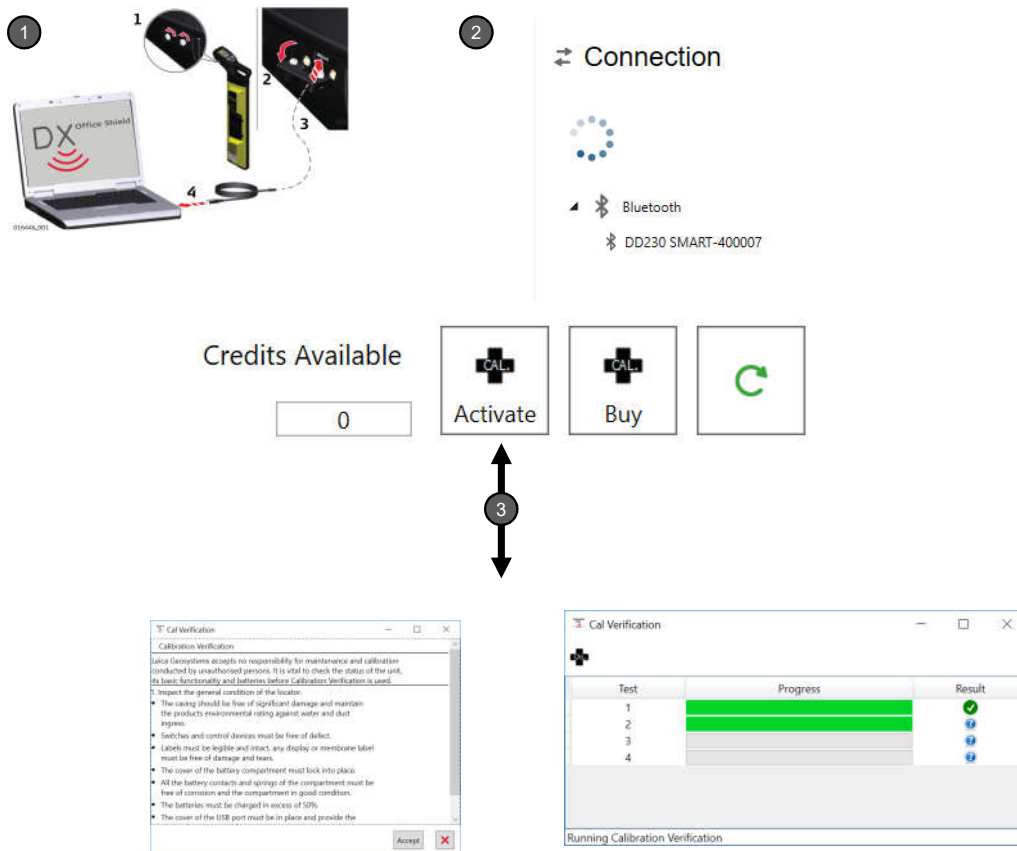

- Calibration verification is a process for dealers and end users, in which user can verify if DD220/230 SMART holds its calibration against factory calibration.
- Calibration verification credits can be purchased via SU using article number (discounts apply) or using credit card through DX Office Shield (no discount applied). To utilise calibration verification credits, user must run DX Office Shield software and connect a locator to a PC via USB. With each successful verification one credit is consumed and customer receives Calibration Certificate Bronze.
- There are two calibration verification credit options –1 pc and 50 pcs.
- Prerequisite to use calibration verification credits: customer must have created account in DX Office Shield and have an Internet connection.

- when it has to be **right**

CalMaster

Activating Calibration Verification

CalMaster– Activating Calibration Verification

Calibration Verification can be activated providing that you have sufficient credits and that the locator is connected to a PC via USB

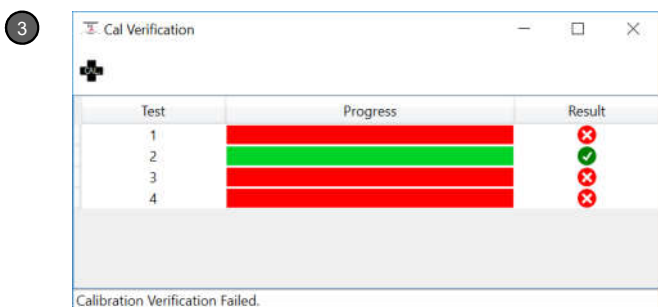

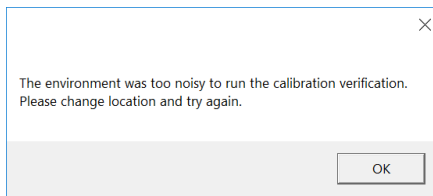

- 1) Device Connection;** connect the device to the PC via USB. The PC must be connected to the internet and the device battery level must be over 50%
- 2) Connection;** power on the device and then double click on the discovered device. Once a connection is established, the device will remain on without the need to maintain trigger pressure
- 3) Activate;** complete ordered by (optional) and issued by (mandatory) fields then click on Activate, Calibration verification commences once the advisory notes have been accepted

- when it has to be right

Leica
Geosystems

CalMaster

Calibration Verification Outcome

CalMaster – Calibration Verification Outcome

The Calibration Verification outcome is displayed throughout testing

- 1) Calibration Verification Pass;** all test progression bars infilled green and Calibration Verification successful displayed. Certificate issued and locator updated
- 2) Calibration Verification Fail;** external electrical interference too high to conduct tests. Test is halted and advisory displayed. Reposition locator away from electrical sources and retest.
- 3) Calibration Verification Fail;** device fault detected. Advisory displayed noting the fault and the test is repeated. If the device fails the repeated test a failure report is issued.

A Calibration Verification credit is only deducted if the tests are successful and a certificate has been issued

Calibration verification results

Frequency	Factory Top	Factory Bottom	Measured Top	Measured Bottom	Specification	Pass/Fail
High	0.02823439	0.02462004	0.02825980	0.02483517	± 5%	PASS
Low	0.02698858	0.02489302	0.02695917	0.02483192	± 5%	PASS

Note:
 This Calibration Verification Certificate has been produced using DX Office Shield™ CalMaster. Calibration Verification does not verify unrelated circuitry or the products mechanical integrity. Leica Geosystems accepts no responsibility for maintenance and calibration conducted by unauthorised persons. It is vital to check the status of the unit, its basic functionality and batteries before Calibration Verification is used. The unit should be returned to a Leica Geosystems Authorised Service Centre in the case of any concern.

Reference calibration

Date of reference calibration: 24/05/2018

Location of calibration: Leica Geosystems, Unit 1 Blythe Park, Cresswell Lane, Cresswell, Stoke-on-Trent, ST11 9RD, United Kingdom

Calibration results:

Frequency	Measured Value	Pass/Fail
450.0	0.9777	PASS
512.0	0.9782	PASS
640.0	0.9780	PASS
8162.0	0.9656	PASS
30000.0	1.0007	PASS
32768.0	1.0020	PASS
131072.0	1.0193	PASS

Calibration validation results:

Frequency	Factory Top	Factory Bottom	Pass/Fail
High	0.02823439	0.02462004	PASS
Low	0.02698858	0.02489302	PASS

This is to confirm that the product detailed herein has been tested and complies with the manufacturers specification. This product has been designed and manufactured in compliance with ISO 9001 standard.

Calibration Verification Outcome

1

☞ To maintain environmental protection open and use the USB port only in dry conditions. Always reinstate the cover after use.

1. Unscrew the fastening screws of the cover and open it.
☞ For guidance on establishing a connection, follow the instructions on the external device or software. Refer to the manufacturer's instructions.

2. After disconnection, reinsert the cover and tighten the fastening screws.

CalMaster – Calibration Verification Outcome

Following the Calibration Verification remove the USB cable and secure the device's USB cover in place

- 1) **To maintain environmental protection open and use the USB port only in dry conditions. Always reinstate the cover after use.**

CalMaster– Local Certificates

Calibration Verification certificates and failure reports are saved to your PC and to DX Office Shield's server.

- 1) **Local Certificates;** provides access to certificates saved to your PC
- 2) **Certificate Folder;** click on the folder to view all PDF certificates
- 3) **Certificate Selection;** from the drop down menu select the device that you want to display certificates for.
- 4) **Certificate – Failure Report;** double click on a row entry to display the certificate or failure report.

CalMaster

Server Certificates

CalMaster– Server Certificates

Server Certificates can only be accessed when you are logged in.

- 1) **Server Certificates;** provides access to backup certificates saved on DX Office Shield server
- 2) **Certificate Selection;** from the drop down menu select the device that you want to retrieve certificates for.
- 3) **Date Information;** displays the date range of certificates for the selected device
- 4) **Date retrieval;** click the date option and enter a date range, click Search. The number of certificates for this period is displayed. Click the Download icon to retrieve these
- 5) **All;** click the All option and then download to retrieve all certificates for the selected device
- 6) **Download;** click to download certificates. Downloaded certificates are saved to the Local certificate folder - when it has to be right

Unpair Bluetooth device when disconnecting

Settings – Introduction

The settings page allows you to apply global setting to DX Office Shield

1) Language;

- Select a language type from the dropdown menu
- Select a CSV format you wish to use to import/export CSV files in

2) Import Locator files; import saved Digicat or DD locator files or folders. Click on the file or folder icon and navigate to the logfile location.

3) Data; shows where information is saved to

4) Settings; Select “unpair the Bluetooth device when disconnecting” to ensure device closure

For importing legacy logfiles the CSV format needs to be set to English

- when it has to be **right**

LogFile Content

Header Detail	Description
Transferred By	Displays the details of the person who downloaded the locators scan session
Transfer Date	Displays the computers or mobile device date when the locators scan session was downloaded
Transfer Time	Displays the computers or device time when the locators scan session was downloaded
UTC Date	Displays the locators date when the locators scan session was downloaded.
UTC Time	Displays the locators time when the locators scan session was downloaded.
UTC Offset	Displays the locators time zone offset as set up on initial configuration or by DX Office Shield
Session Date	Date of the locators scan session
Session time	Time of locators scan session recorded in UTC format. The UTC time is automatically updated by the GPS
File Length	Number of entries in the locators scan session (recorded in seconds)
Model	Displays the locators model number
Serial No	Displays the locators Serial Number
Firmware Ver	Displays the locators Firmware version
Cal Due	Displays the calibration due date as seen on the locator
Maintenance scheduler	Displays if the locators maintenance scheduler is switched on or off
Company Name	Displays the locators owner information
Company Tel	Displays the locators telephone information
email	Displays the locators email information
Web	Displays the locators web address information
User ID	Displays the locators user name information.
User tel	Displays the locators telephone number
Notes	

UTC;

Universal Time Coordinate is the primary time standard by which the world regulates clocks.

The time is not adjusted for daylight saving time.

The offset time recorded in the scan session is based on the UTC time with an adjustment made for the UTC offset

The UTC offset is based on the entry made during the initial configuration or a subsequent update in DX Office Shield

Session detail	Offset Time	Date	Health Check	Battery (%)
	10:18:09	04/04/2018	---	61
	10:18:10	04/04/2018	---	61
	10:18:11	04/04/2018	---	61

DD SMART Locators

LogFile Content

Scan Session	Description
Offset Time	Displays the locators time of use (scan session), based on the Session time plus the Offset adjustment
Date	Displays the date the locator was in use.
Health Check	Displays the status of the Health Check test --- = test not performed Yes/ = Test in progress Yes/Pass = Test passed Yes/ERR = Test failed Yes/Halt = Test started and could not commence due to a high level of interference
Battery(%)	Displays the battery power level as a percentage
Fault Code	Displays notification of a fault --- = No Fault recorded 123 = Fault Code Note, Refer to User Manual for Fault Codes
Hazard	Displays Hazard Zone status --- = Hazard Zone on and not alarming < 0.3 or < 0.5 = Hazard Zone Alarming -X- = Hazard Zone switched off
Swing	Displays Swing Alert status --- Swing Alert on and not alarming Yes = Swing Alert alarming -X- = Swing Alert switched off

Scan Session	Description
Mode	Displays the locators mode of use. Passive modes; Power = Power mode Radio = Radio mode A0 = Auto passive mode with nothing detected AP = Auto Power signal detected AR = Auto Radio signal detected Transmitter Modes; TX0 = Auto transmitter mode selected with nothing detected. TX512Hz = 512Hz selected TX640Hz = 640Hz selected TX8kHz = 8kHz selected TX33kHz = 33kHz selected TX131kHz = 131kHz selected TX33kHz-131kHz = Avoid (combined) selected with 33kHz dominant TX 131kHz-33kHz = Avoid (combined) selected with 131kHz dominant Note, Auto transmitter prefixes the frequency the letter "a" e.g a33kHz = Auto TX mode detecting a 33kHz signal a8kHz - Auto TX mode detecting an 8kHz signal Sonde Modes; S512 = 512Hz selected S640 = 640Hz selected S8K = 8kHz selected S33kHz = 33kHz selected

Logfile Content

DD SMART Locators

LogFile Content

Scan Session	Description
Locate Scale	Displays the Detection status as seen on the locators locate scale 0 to 75
Numeric signal	Displays the value of Numeric signal reading range 0 to 999
Overload Protection	Displays if the mode overload protection has activated indicating the presence of a strong signal source --- Normal operation Yes = overload protection active
Depth	Displays the depth estimation --- No depth recorded < depth = Depth exceeds minimum depth range > depth = Depth exceeds maximum depth range low = Signal source to low to take a reading high = Signal source to high to take a reading
Current	Displays the current reading measured in mill amperes (mA)
Unit	Displays the depth estimation measurement shown on the locator M = metric I = Imperial
Line/Sonde	Displays if a measurement was to a Line (cable/pipe) or a Sonde L = Line S = Sonde
Latitude and Longitude	Displays the geographical position of use, shown in decimal degrees --- = No position recorded (GPS Status white) 4851.29, 2174.03 = GPS position recorded (GPS status green) -X- = Function not available (Fault with GPS, status Red)

Scan Session	Description
GPS Satellites	Displays the number of satellites available
Point of Interest	Displays the reference to a Point of Interest --- = POI on but not recorded -X- = POI switched off 01 = POI reference recorded
Trigger release	Displays if the trigger has been released --- = Trigger on -X- trigger released and locator down powering
Cal Test	Displays the status of the Calibration testing --- = test not performed Yes/ = Test in progress Yes/Pass = Test passed Yes/ERR = Test failed Yes/Halt = Test started and could not commence due to a high level of interference (prohibit on screen)
Comm	Displays method of communication DD = Bluetooth DD output selected BT1 = Bluetooth BT1 output selected BT2 = Bluetooth BT2 selected User = User configured -X- Communications off
