## **Business Update - Airborne Imaging Scanners Zeiss Photoscanner**

Dear Photoscanner Customer,

The Zeiss Photoscanner as airborne imaging scanners are exclusively supported by Leica Geosystems for quite some years meanwhile. And we are very happy that there are still many satisfied users around the world who are working with the scanners till today and want to continue to use them also in the future. This is the reason & motivation for Leica to continue the support for these products. To save the investment for all off those customers we developed an upgrade kit to ensure the usage of these systems also in future:

- Upgrade kit including new Software with certified Host and SCSI adapter to run in Windows 10 environment.
- privileged supply of spare parts only for Maintenance customers
- Significant discounts for maintenance contracts when running two or more units

Please contact your local sales representative or myself for more information. We will be happy to discuss your individual requirements and requests.

Best regards

***Uwe Lange***
